

How CliniSync Supports Patient-Centric Care

And the Research Says....		CliniSync Services
Studies show physicians have difficulty coordinating care because their patients belong to multiple medical systems. ¹	Connect 	Access a single community record of your patients' encounters with other CliniSync hospitals and providers including related results and reports.
EHRs that can take in structured data can be used to analyze, report and track patient outcomes at both a patient and population level. ²	Integrate 	Receive patients' lab results, radiology and transcribed reports directly into your EHR or use your EHR to exchange secure email with other providers to coordinate care.
Primary care clinicians give the highest importance to timely electronic notification of hospital discharges and patient deaths. ³ Notifications of ED visits allow the staff to follow-up and educate patients of appropriate use or after-hours support.	Notify 	Receive a notification when your patient goes to the Emergency Department or is admitted to the hospital, discharged or transferred to another facility.
Leveraging public health sources for immunizations and disease reporting help you to identify gaps in care and proactively manage a patient's condition. ²	Contribute 	Report data to public health registries or contribute care summaries to the HIE for other treating providers to access.
Analysis shows having a nonclinician responsible for care coordination is associated with greater implementation of care coordination. ³ Staff adoption of health IT is most effective when emphasis is placed on how it helps the patient.	Consult 	Get guidance on practice transformation, health IT tools optimization, MU requirements, audits, quality measure reporting and more.
Affordability of health IT is a major barrier for smaller practices and safety net providers. ²	DIRECTory 	Sign up for secure email capability and gain access to a statewide provider DIRECTory that includes DirectTrust email addresses of other providers at no charge.
